HTML (Hypertext Markage Language)

How works a web page?

How looks like my web page

```
<!DOCTYPE html>
<html>
<head>
  <meta charset="UTF-8">
  <title>Mi primera página</title>
</head>
<body>
  <h1>Hola Mundo</h1>
  <p>Esta es mi primera página web.</p>
</body>
</html>
```

Popular tags

- `<html> ... </html>` (root)
- `<head> ... </head>` (information for the browsers)
- `<body> ... </body>` (user view)
- `<h1> ... </h1>` (main title)
- `<h2> ... </h2>` (subtitle)
- `<p> ... </p>` (paragraph)
- `<a href> ... </a>` (hyperlink)
- `<img src ... >` (include image)
- `<div> ... </div>` (general container)
- `<ol> ... </ol>` (lists)
- `<il> ... </il>` (list)
- ...

Go to my web page!

...

(click here)

```
<style>
body {
    font-family: Arial;
    background: #f5f5f5;
    padding: 20px;
}
.camiseta {
    background: white;
    padding: 15px;
    margin-bottom: 12px;
    border-radius: 8px;
    border: 1px solid #ccc;
}
</style>
```

```
h1 {  
    color: orange;  
}  
.camiseta {  
background: white;  
}
```

h1 is in a HTML tag. .camiseta is in a class work over any element that contain the class camiseta.

```
<div class="camiseta" > ... </div>  
<p class="camiseta" > ... </p>
```

```
h1 {  
  color: orange;  
}
```

h1 is named **selector** and color:orange; is the rule, where color and orange are property and value respectively.

Tables

```
<table>
  <tr>
    <th>País</th>
    <th>Población</th>
  </tr>
  <tr>
    <td>Colombia</td>
    <td>52 millones</td>
  </tr>
  <tr>
    <td>México</td>
    <td>130 millones</td>
  </tr>
</table>
```

Scrapping table

```
1 import pandas as pd
2 from io import StringIO
3 tables = pd.read_html(StringIO(html_text))
```

...

Lab

Introductory lab

(Click here)

Soup Object

```
1 soup = BeautifulSoup(response.text, "html")  
2 soup.find_all("article", class_="product")  
3 #all articles tags with class product
```

The `soup.find_all` search all **articles** tags with the class **product**.

...
Dont forget **Selector** not carry out dot instead **classes** yes (in CSS).
